

QOSIM QODIROV

FRONTEND DEVELOPER

Tashkent • +998 97 764 55 66 • qosimqodiriy701@gmail.com

SUMMARY

Detail-oriented Frontend Software Developer specializing in Vue.js and Nuxt.js. Proven expertise in architecting scalable commercial platforms, complex logic-based applications, and interactive user interfaces using TypeScript. Strong focus on API integration, complex data structuring, and delivering seamless user experiences.

WORK EXPERIENCE

Middle Frontend Developer | laCafe company - Full time **December, 2024 – Present**

- **Team Leadership:** Managed a team of 3 frontend developers, conducting rigorous code reviews and enforcing architectural standards.
- **Architecture:** Architected a scalable, multi-tenant Vue 3 and Nuxt.js application within a monorepo, enabling domain-driven deployments for various merchants from a single codebase.
- **Complex State Management:** Designed robust data flows for deep product customizations, utilizing state cloning to separate pristine API data from interactive drafts and prevent data pollution.
- **Refactoring & Optimization:** Refactored decentralized business logic into highly reusable Vue composables, significantly reducing code duplication and technical debt.
- **Interactive Mapping:** Integrated Yandex Maps for dynamic branch selection, engineering custom bounds calculations and smooth auto-zooming logic for an optimized UX.

Middle Frontend Developer | 7Saber - Part time **March, 2025 – September, 2025**

- Modernized a legacy codebase by resolving critical bugs, reducing technical debt, and transitioning the application to a scalable frontend architecture.
- Engineered end-to-end features for a high-volume marketplace handling diverse product catalogs for both domestic and international (export) markets.
- Improved application stability and performance by establishing reusable component patterns and optimizing API data consumption.

Middle Frontend Developer | Hesap (B2B Contract & Debt Management Platform) - Part time **September, 2024 – March, 2025**

- **Core Platform:** Engineered a secure B2B digital platform for contract signing, debt tracking, and merchant trading agreements.
- **Complex Workflows:** Built dynamic, multi-step contract generation flows and intuitive dashboards for tracking active financial obligations.
- **Data Integrity:** Implemented strict form validation and state management to ensure the absolute accuracy of sensitive legal and financial data.

ELD & Fleet Management Platform

- Engineered a real-time fleet tracking dashboard, integrating advanced mapping APIs to visualize live vehicle locations, historical routes, and telemetry data.
- Developed interactive HOS (Hours of Service) logbook visualizations, transforming complex compliance data into intuitive timelines and data grids for fleet managers.
- Optimized live data handling (via WebSockets/polling) to ensure immediate, frictionless UI updates for driver status changes, vehicle diagnostics, and critical violation alerts.
- Built scalable administrative interfaces for managing driver profiles, dispatching, and compliance reporting, utilizing reusable UI components to maintain a clean and consistent user experience.

Outsource projects

- Engineered multiple outsourced client projects simultaneously, ranging from responsive corporate websites to complex enterprise CRM systems.
- Architected scalable frontend solutions for diverse business domains, implementing role-based dashboards, dynamic forms, and secure data handling for internal CRM tools.
- Accelerated project delivery timelines by building reusable component libraries and standardizing frontend architectures across various concurrent web applications.
- Adapted quickly to varying technical requirements and client needs, consistently delivering high-performance, cross-browser compatible interfaces.

EDUCATION

Bachelors Degree | Tashkent State Transport University

- Graduated: June, 2024

SKILLS

- Frameworks & Libraries: Vue.js (Vue 3, Composition API), Nuxt.js (SSR, SSG), Element Plus
- Languages: TypeScript, JavaScript
- State Management & Architecture: Pinia / Vuex, Component-Driven Development, Modular Architecture
- UI/UX & Styling: Tailwind CSS, Responsive Web Design, UI/UX Optimization
- APIs & Integrations: RESTful API Integration, Yandex Maps API, Client-Side Routing
- Core Competencies: Advanced State Management, Custom Algorithm Design (Complex sorting, filtering, and logic mapping), Web Performance & Asset Optimization (NuxtImg)
